

ICC CAPABILITIES: Benchmarking & Audits

Client reference and specialist CV's available on request

Benchmarking and Auditing:

ICC offers plant benchmarking and audit services to clients. These services enable a client to compare their plant's performance with other plants, with the aim of identifying key areas for plant improvement.

The major areas to be considered (but not limited to) are as follows;

- Cost of production
- Raw materials consumption
- Specific manning required
- Specific output
- Technology used
- Specific energy consumption
- Other utility consumption
- Cement qualities produced
- Environmental standards and compliance
- Maintenance strategy and costs
- Reliability performance of key areas of plant

Reporting:

Based on the above factors ICC will produce an objective report that provides a detailed analysis of each area impacting on plant efficiency. In addition, we provide a comparison with other producers both locally (where possible) and Internationally. This will enable clients to identify the specific areas for plant improvements both operationally and for equipment replacement. The primary aims of the ICC report are to enable clients to improve plant output, cement quality and to reduce the cost of production.

In-house Data Base:

We use our confidential in-house database of benchmarking information from strategic plants located around the world, to assess a plant technically and to identify the strengths and weaknesses of the business.

Critical Review:

In our fully comprehensive report we include a structured review of the plant to cover all of the above areas and highlight any particular areas of concern.
